# Installing NoMoreCaptchas

A Guide for Drupal-based Websites

**Oxford BioChronometrics SA**  
Luxembourg

September 2015

## Table of Contents

1. Before You Begin	3
2. Register	3
3. Install NoMoreCaptchas	3
4. Configure NoMoreCaptchas	5
5. Admin Dashboard	6
6. Developer Section	7

## 1. BEFORE YOU BEGIN

**Before you install NoMoreCaptchas, it's important to note a few key things.**

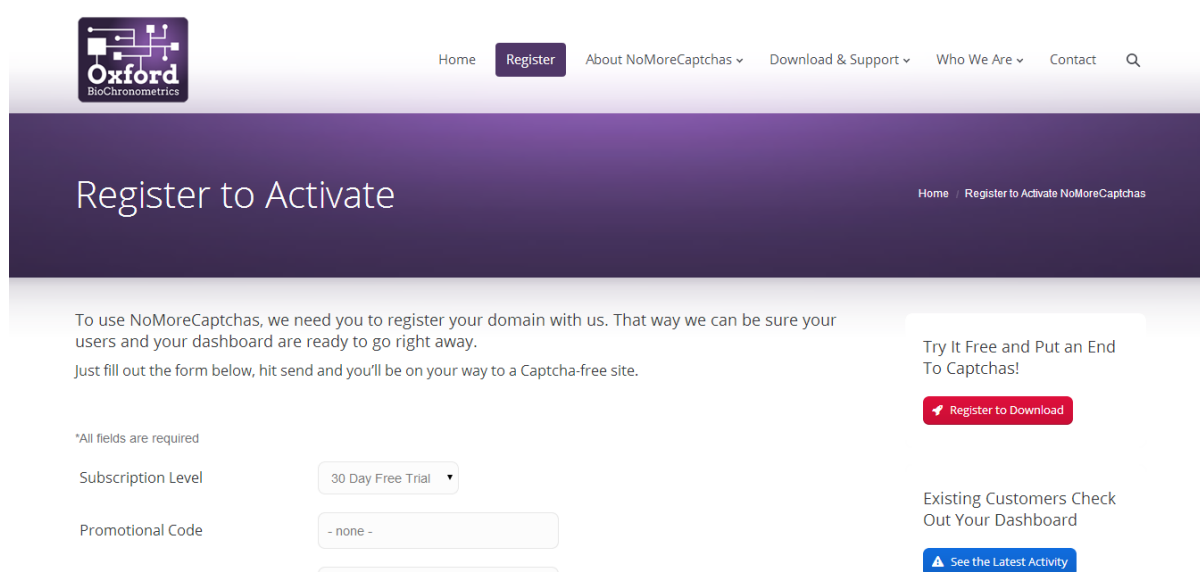

Once you install NoMoreCaptchas, your registration and login pages will be protected from spam bots. Our studies have shown that over 90% of bots that attempt to gain access to a site do so through those two pages.

If you'd like to put the code on additional pages, please contact us and we can assist you.

First, though, please follow these instructions carefully to ensure that NoMoreCaptchas and Drupal are integrated properly.

## 2. REGISTER

Register at [NoMoreCaptchas.com](https://NoMoreCaptchas.com) to receive your License Key. Make sure you accept the terms and conditions.

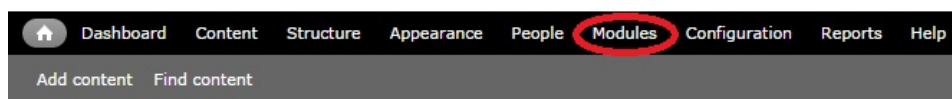

The screenshot shows the registration page for NoMoreCaptchas. At the top, there is a navigation bar with links for Home, Register, About NoMoreCaptchas, Download & Support, Who We Are, and Contact. The main heading is "Register to Activate". Below this, there is a text block explaining the registration process: "To use NoMoreCaptchas, we need you to register your domain with us. That way we can be sure your users and your dashboard are ready to go right away. Just fill out the form below, hit send and you'll be on your way to a Captcha-free site." There is a form with two fields: "Subscription Level" with a dropdown menu set to "30 Day Free Trial" and "Promotional Code" with a text input field containing "- none -". To the right of the form, there are two buttons: a red "Register to Download" button and a blue "See the Latest Activity" button. There is also a link for "Existing Customers Check Out Your Dashboard".

An email will be sent to you within seconds once you submit your registration. If you do not receive it within 90 seconds, please check your spam folder. Be sure to save that email!

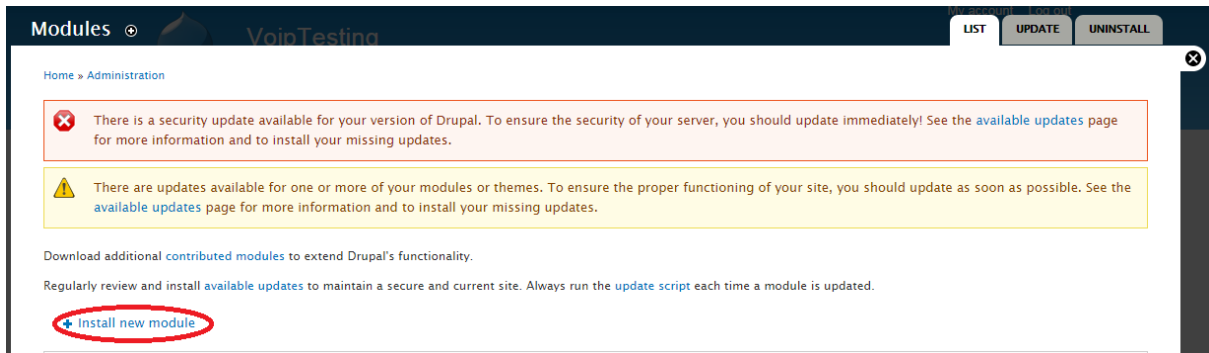

## 3. INSTALL NOMORECAPTCHAS

In order to protect your login and registration pages, please follow following instructions to install and enable the Drupal module.

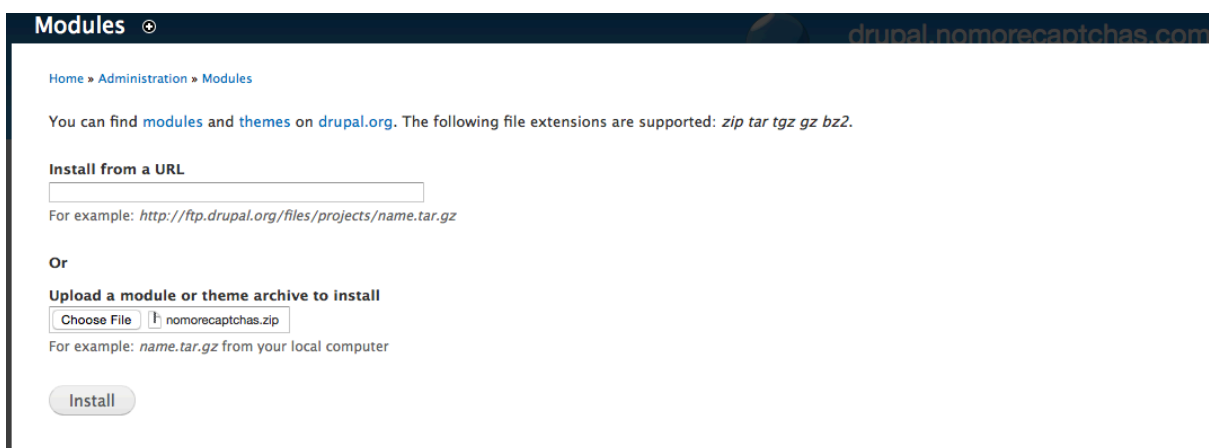

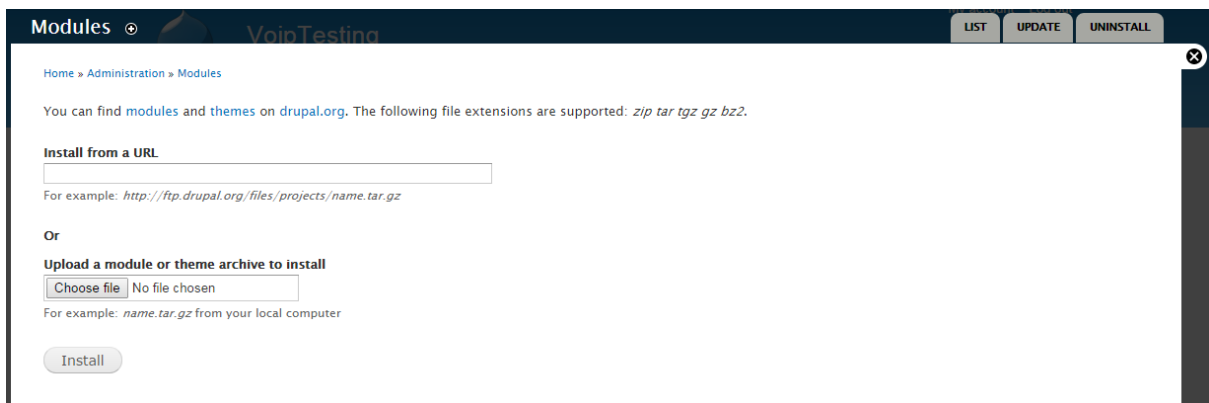

- a. Login on your site with admin account and go to modules on the admin menu.

b. You will be directed to the following page, Click on “Install New Module”.

c. You may choose to either directly install the module (nomorecaptchas) from the drupal.org download link or you may choose to download it first and then select the file.

d. Once the file is selected, click on Install. The NoMoreCaptchas module will then install automatically.

e. The module is now successfully installed. Click on “Enable newly added module.”

**Update manager**

✔ Installation was completed successfully.

**nomorecaptchas**

- Installed *nomorecaptchas* successfully

**Next steps**

- [Install another module](#)
- [Enable newly added modules](#)
- [Administration pages](#)

f. Now check the box before **NoMoreCaptchas** module and save your configuration.

## 6. DEVELOPER SECTION

We have implemented different hooks in `no_more_captchas.module` file. Developers may customise functionality as required. Some of the hooks used are:

- `Hook_help`  
This is used to write the help page for the module which contains FAQs.
- `Hook_menu`  
This is used to set a path to the module settings page.
- `Hook_permission`  
This is written to set permission for different users.
- `Hook_form_alter`  
`Form_alter` is used here to add the iFrame on Drupal login/registration forms.
